Dr. Jesse E. Filbrun

- Ph.D. in Evolution, Ecology, and Organismal Biology
- Lower food web dynamics
 - Natural and human impacts on aquatic and marine ecosystems
- Southern Arkansas University

Introduction

<h2>Deepwater Horizon Oil Spill</h2>	<h2>Red Snapper</h2>
<p>April 20, 2010 – September 19, 2014 (Hoffman et al. 2011)</p>	<p>Spawn from May/June to September/October (Moran and Morais 1998; Kulaw 2012) Hatch ~24 – 27 hours after fertilization (Rabalais et al. 1980)</p>
<p>Macondo Well 100 mi south, 1500 m deep (Atlas et al. 2011)</p>	<p>Larvae occupy shallow waters 15 – 30 m deep (Szedlmayer et al. 2014)</p>

Introduction

- Survival affected by mortality events
- Investigate diets (gut content), growth (size at age), and condition (size)

Null Hypothesis

- H_{01} : Larval red snapper diets, growth, and condition will not differ across periods (before, during, and after the oil spill).

Methods: Overview

- Fisheries Oceanography of Coastal Alabama (FOCAL)
 - Long-term ichthyoplankton and zooplankton survey
 - 2004 – 2011
- Sample Sites:
 - T20: 20 m deep
 - T35: 35 m deep
- 357 Red snapper larvae

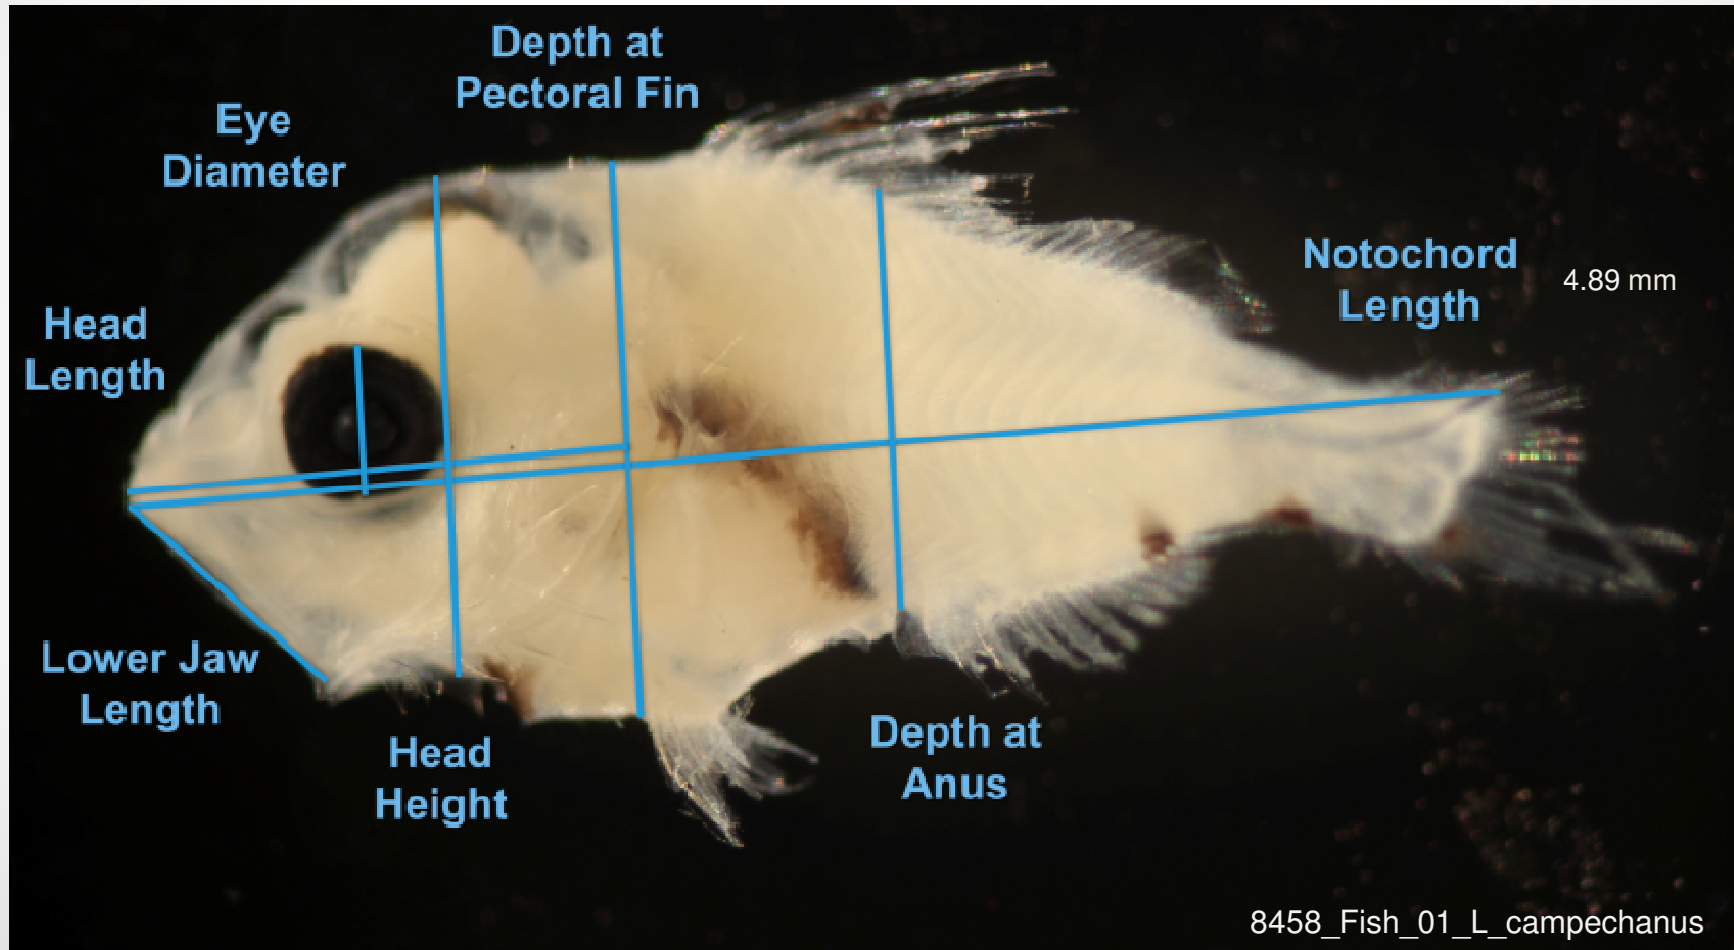

Methods: Condition

- Imaging
 - Camera-mounted dissecting microscope
 - 5x magnification

Methods: Condition

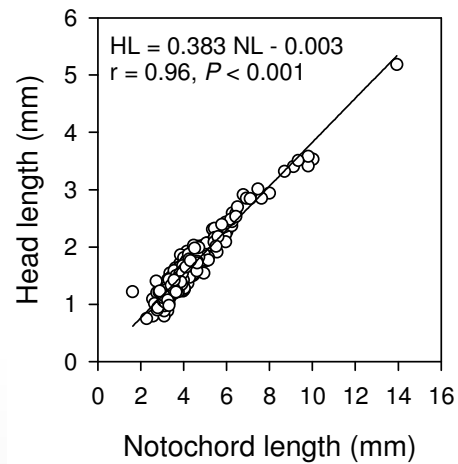

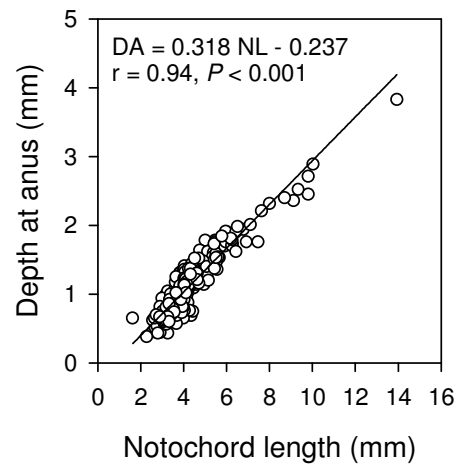

Methods: Growth

- Otolith extraction
- Imaging
- Measuring
 - Longest radius
 - Daily rings
- Size vs. Age

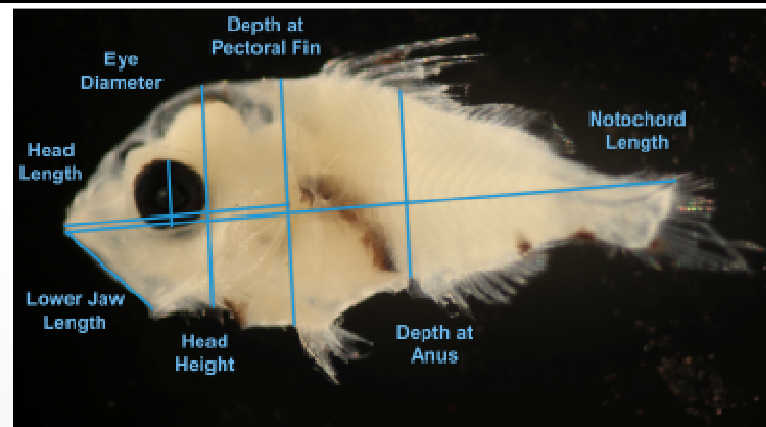

Results: Condition

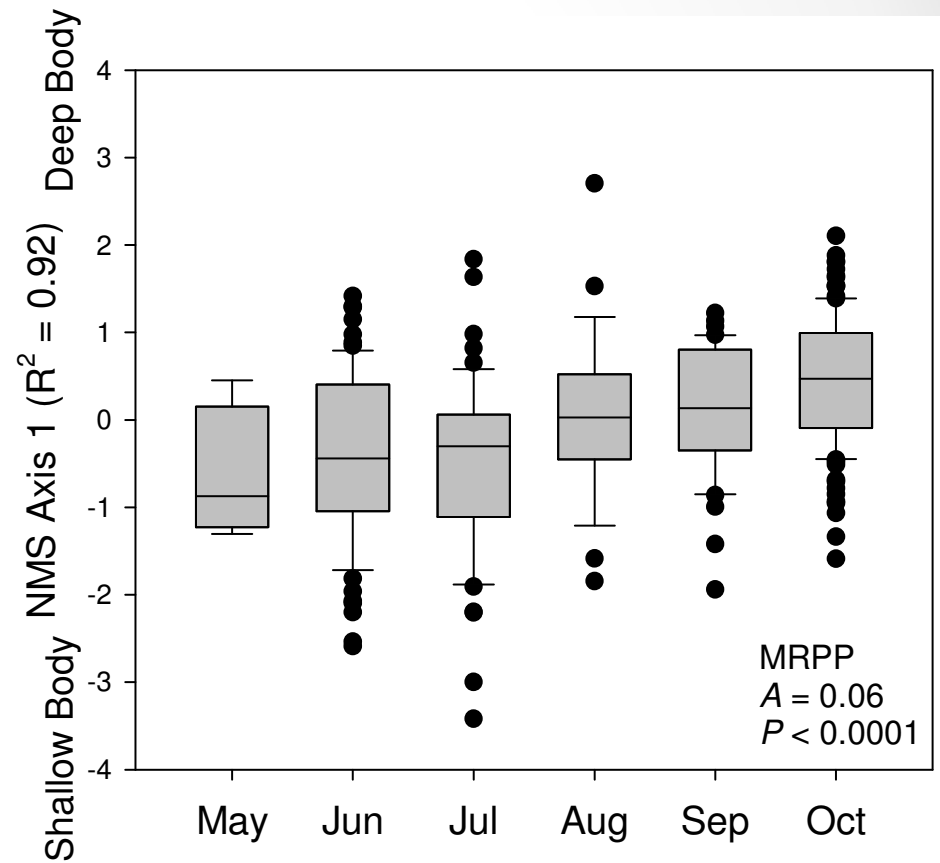

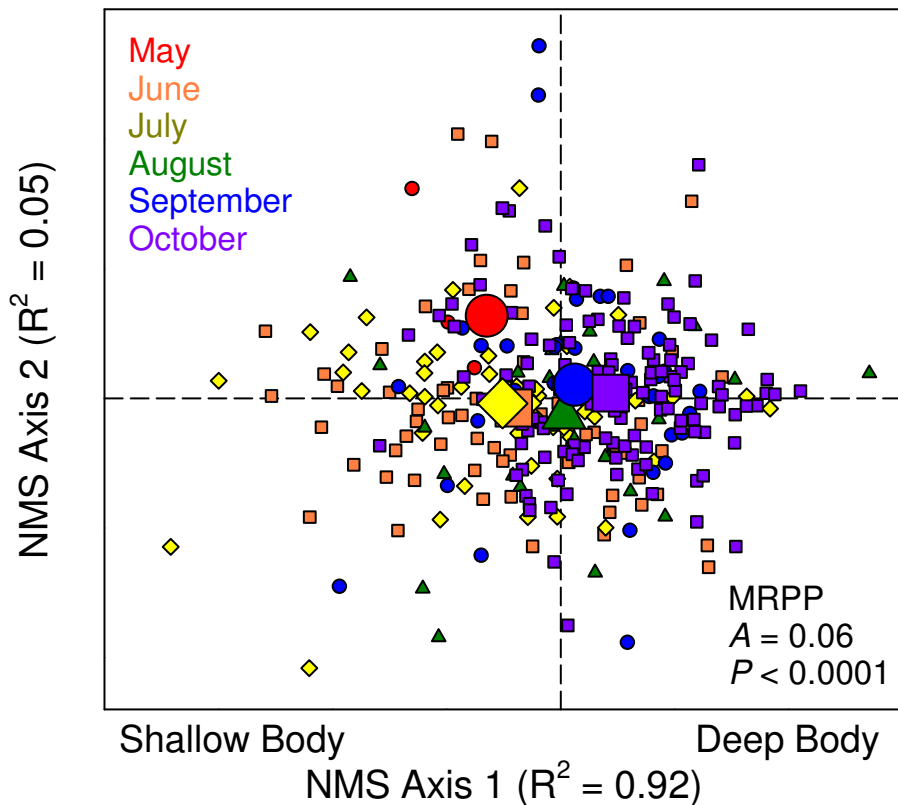

Results: Condition

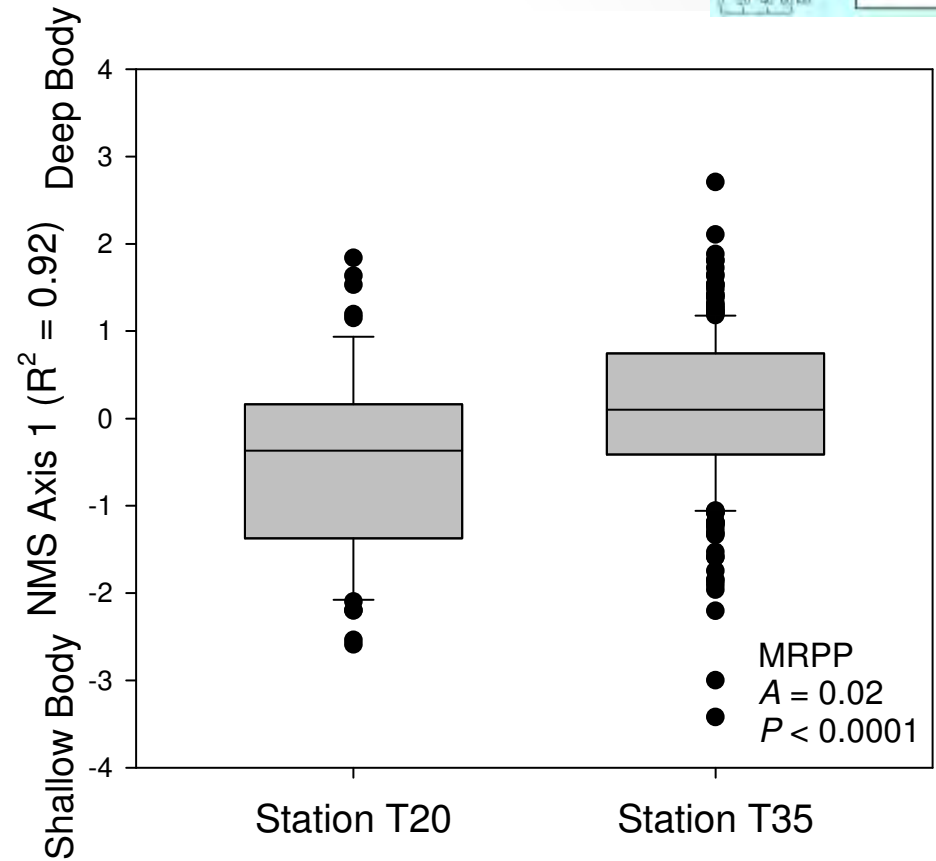

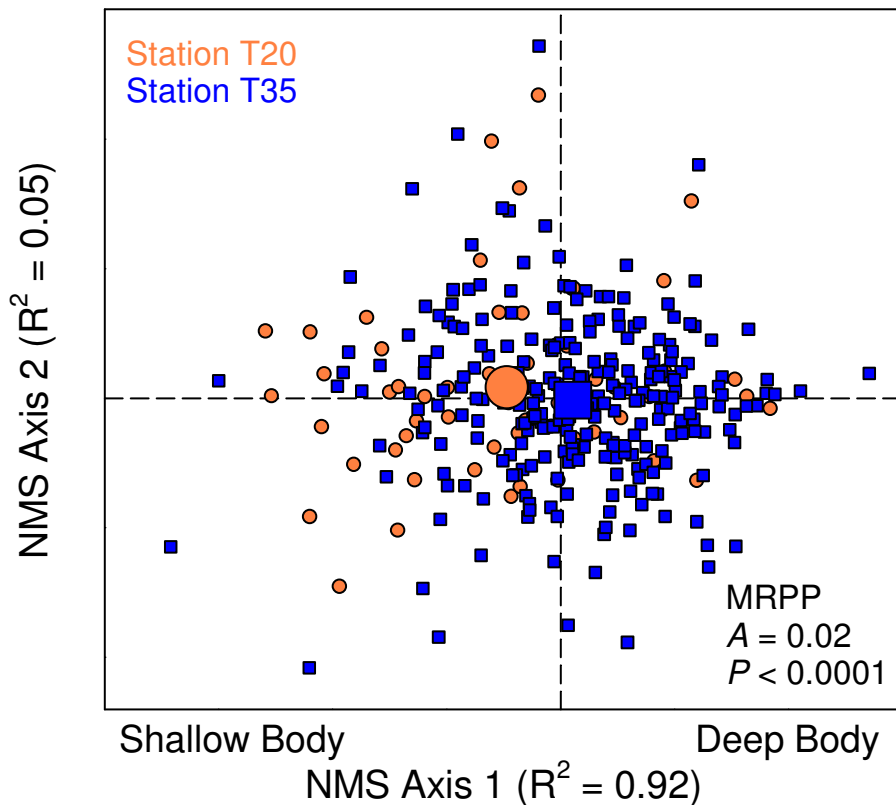

Body dimension	NMS Axis 1 ($R^2 = 0.92$)		NMS Axis 2 ($R^2 = 0.05$)	
	<i>r</i>	<i>P</i>	<i>r</i>	<i>P</i>
Depth at pectoral fin (DPF)	0.93	< 0.001	-0.18	0.00
Depth at anus (DA)	0.89	< 0.001	-0.15	0.01
Head length (HL)	0.71	< 0.001	0.41	< 0.001
Head height (HH)	0.94	< 0.001	-0.02	0.71
Eye diameter (ED)	0.65	< 0.001	0.00	0.94
Lower jaw angle length (LJL)	0.62	< 0.001	0.20	< 0.001

Results: Condition

Results: Condition

Conclusion

- Morphometrics: Condition
 - Fish caught in earlier months were smaller-bodied than fish in later months
 - Fish caught at T20 were smaller-bodied than those at T35

Conclusion: Future Direction

- Otolith (length at age), gut (diet), isotope (diet), and dry weight (weight at length/condition) analyses still pending

Conclusion

- Other studies:
 - 2010 and 2011 were the worst recruitment years since 1994 (SEDAR 2013)
 - Red snapper abundance was lower after the spill (Patterson and Jagoe)
 - Preliminary results show a decline in growth rate at age after 2010 (Herdter and Murawski 2014)
 - No decline in juvenile red snapper abundance in 2011 (Szedlmayer et al. 2014)
